EDUCATION

VNU University of Engineering and Technology

Bachelor's in Information Technology, GPA: 3.64/4.0

Hanoi, Vietnam

2017 – 2021

EXPERIENCE

Mid-Level Backend Developer

VTI

July 2023 – Present

Hanoi, Vietnam

- Built real-time IoT tracking, MES, and WMS solutions for manufacturing and warehouse operations, improving production visibility and order fulfillment
- Used MQTT for real-time machine control and status monitoring, and built live dashboards to track machine performance and production progress
- Used ClickHouse for fast analytics and reporting on large-scale data
- Implemented CDC pipelines streaming data from MongoDB and PostgreSQL into ClickHouse for real-time updates
- Built streaming pipelines to automate report exports to Excel

Mid-Level Backend Developer

EVNFinance

Aug. 2022 – June 2023

Hanoi, Vietnam

- Built and maintained backend systems (NestJS, MongoDB, PostgreSQL) for lending solutions
- Developed backend for an investment app using Kafka and Docker in a microservices architecture
- Supported mobile development with React Native

Junior Backend Developer

Merchize

June 2021 – July 2022

Hanoi, Vietnam

- Built a product mockup feature allowing users to preview designs on products in real time, using Python, Canvas, and Node.js
- Integrated Three.js and React to enable 3D product views, enhancing user experience
- Built tools for adding and adjusting designs across product templates, collaborating with the design team on usability

Full Stack Developer Intern

Merchize

June 2018 – May 2021

Hanoi, Vietnam

- Built an app connecting e-commerce platforms (Amazon, eBay, Etsy) for order sync, fulfillment, and shipment tracking, using Node.js, ReactJS, and MongoDB
- Developed ad spy tools to track and analyze advertising campaigns on Amazon, Etsy, and Facebook
- Implemented Chrome extensions for real-time ad monitoring and campaign optimization

PROJECTS

IoT & MES Real-Time Analytics Pipeline | *NestJS, MQTT, ClickHouse, PostgreSQL, Redis* Jan. 2024 – Present

- Engineered a high-throughput IoT telemetry pipeline using MQTT and NestJS for machine status tracking
- Architected CDC streaming from PostgreSQL/MongoDB to ClickHouse, optimizing real-time dashboard analytics
- Developed automated streaming report generator exporting large-scale operational data to Excel

3D Product Customizer & Order Sync Engine | *Node.js, React, Three.js, Python, MongoDB, Docker* June 2021 – May 2022

- Implemented dynamic 3D mockup rendering system with Three.js and HTML5 Canvas for instant user preview
- Built multi-platform order sync service integration connecting Amazon, eBay, and Etsy stores
- Created automated Chrome extensions for real-time e-commerce ad monitoring and analytics

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL

Frameworks & Libraries: Node.js, NestJS, ReactJS, React Native, Redux, Three.js, Tailwind CSS, Bootstrap

Databases & Messaging: MongoDB, PostgreSQL, MySQL, ClickHouse, Redis, Kafka, RabbitMQ, NATS, MQTT

Architecture & Tools: Microservices, Docker, CI/CD, Git, Linux
